

# NEW PACKAGING

## Single Use Containers

RICCA Chemical Company now offers single use containers that are the ideal packaging for liquid handling in bioresearch and biopharmaceutical production where non-sterile solutions are acceptable. These new single use bags offer a cost-competitive alternative to your current packaging while maintaining purity and increasing ease-of-use. These bags are compatible with most aqueous and mobile phase solutions. Custom solutions, manufactured to your specifications, are available. All solutions are 0.2 micron filtered during the manufacturing process.

The 5L and 100L bags are polyethylene lined and equipped with 3 polyethylene tube ports with the following fittings:

- 3/8" ID Quick Connect (QC) Insert
- 3/8" ID QC Body
- 1/8" ID Female Luer Lock

The fittings come with resealable polybag covers for dust control. The 100L bag is shipped in a 30-Gal poly drum; the 5L bag is shipped in a 3.5-Gal poly pail.
